

NEWS RELEASE**pro-Solve International Limited
Offer a Combination of High Technology Wireless Communications Products,
Solutions and Expertise for Security and Emergency Services****Singapore Global Security Asia Exhibition March 27th 2007 (GSA 2007)**

GSA 2007 sees the bringing together of a highly experienced team and an extensive range of proven high technology wireless communications products and solutions. The team is focused on providing solutions to customers involved in activities such as homeland security, law enforcement, peace keeping, prison/correctional facilities, emergency response and border control.

pro-Solve International (p-SIL) markets a range of products including advanced technology to counter threats posed by people using wireless communications for unlawful purposes. The company can also provide secure and reliable communications for those either within the security forces or involved with providing emergency response. Extensive experience in wireless technology, development, project management and the provision of turnkey systems ensures the delivery of tailored solutions. p-SIL's capability covers a wide range of technology including GSM, UMTS, CDMA2000, iDEN, TETRA, Satellite, Broadband and IP.

p-SIL's products are typically used in the following applications: -

- Tactical and Strategic wireless solutions for:
 - Surveillance
 - Interception and monitoring
 - Service denial
 - Remote sensing
- Response Team communications needing:
 - Secure communication
 - Deployment in remote locations
 - Temporary deployment
 - Ease of use

Origins of the company go back two years, during which time the original range of products were developed. Subsequently other well proven products have been added to the portfolio and provide the foundation of an essential range of communications solutions for those working within the security and emergency response arena. As well as the addition of the new products to our established surveillance solutions and consultancy services, p-SIL are introducing a new range of products/services at GSA 2007, addressing special communications needs, remote sensing and TETRA consultancy.

The p-SIL satellite IPPBX system provides communications facilities for rapid response teams anywhere in the world and can be scaled to handle as many simultaneous calls and data links as required. The solution enables significant cost reductions compared to alternative satellite systems. There are a range of handset options. Additional encryption is available where secure communication is paramount. Other options provide highly effective unmanned remote area surveillance and sensing capability.

TETRA consultancy services include: coverage measurement, analysis and validation as well as network planning, technology selection, trials and optimisation.

Prior to forming p-SIL, the team worked together as the executive management team of Racal Instruments Wireless Solutions (RIWS), developing and supplying test solutions to manufacturers and network operators in the cellular wireless industry.

Their experience includes: -

- Commercial and military wireless communications
- Worldwide marketing/sales
- Project management
- Engineering development (software and hardware)
- Operations and business processes

During their time at RIWS, the team launched companies in Hong Kong, Korea, Mainland China and India and hence built strong relationships with many organisations within these and adjacent countries. The team has continued to maintain these links and strengthened them with the opening of p-SIL offices in Hong Kong and India.

About pro-Solve International Ltd

pro-Solve International Limited (p-SIL) provides high technology wireless communications products and solutions to customers involved in activities such as homeland security, law enforcement, peace keeping, prison/correctional facilities, emergency response and border control.
